

Digital Intelligence for a Smarter Supply Chain

Digital technologies are reshaping how organisations plan, monitor and manage supply chain operations. This practical course helps participants use digital intelligence to improve real-time visibility, strengthen decision-making and build more agile and resilient supply chains. Participants explore how IoT, AI, big data, blockchain, cloud platforms, predictive analytics and digital twins can improve operational performance and support measurable business growth.

What You Will Learn

- Understand the technologies transforming modern supply chains.
- Use IoT, AI, big data, blockchain and cloud platforms.
- Improve supply chain visibility, efficiency and responsiveness.
- Apply predictive analytics and digital twins to planning.
- Strengthen cybersecurity and supply chain data governance.
- Develop a practical transformation roadmap with measurable outcomes.

Who Should Attend

- Supply Chain Managers & Directors
- Operations Managers & Executives
- Logistics & Procurement Professionals
- IT & Digital Transformation Leaders
- Business Leaders involved in supply chain strategy
- Professionals driving supply chain innovation

Lead Trainer

Michael Lecomte

Michael Lecomte brings nearly 20 years of experience in procurement, supply chain and warehouse management across Europe, the Middle East and Asia. He has led major transformation initiatives, improved supply chain performance and delivered corporate training and academic courses for professionals. His combination of practical industry experience and teaching expertise helps organisations translate warehouse automation strategies into measurable operational results.
